### Description:

Excavator ripper is commonly used in digging hard sand hard soil. Ripper Excavator can be installed on a standard excavator or excavator rock ripper. There are one single teeth type excavator ripper and multiple teeth type excavator. The number of teeth is customized by clients. The important point of the mini excavator ripper is the teeth chosen and also the welding. Because the excavator ripper for komatsu pc200 crack the hard rock or hard sand etc, the high requirement of the teeth is essential. For excavator model which above 30 ton, we chose D90 teeth as the material. D11 teeth also available. Every plate is beveled before welding. By doing so, the welding is strong enough.
