Production Details of Three-section telescopic arm

Premium Material---**BS900E** lighter and stronger

The materials: steel, cylinders, etc are all stored well and keep away from moisture and corrosion

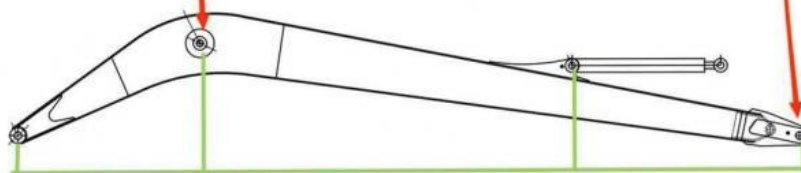

Double-sided boring lathe

After the excavator boom and arm are assembled, the pins on the boom are drilled to ensure that the pins on the boom are parallel to each other and the cross section of the pin hole is perpendicular to the pin. The double-sided boring machine of the boom makes the hole position more accurate and the quality higher.

Make sure the cross section of the pin hole is perpendicular to the shaft.
