Product Description

25m 30m 32m Clamshell Telescopic Arm Excavator with Clamshell Bucket with Teeth

Introduction of one set clamshell telescopic arm excavator:

The clamshell telescopic arm excavator is an innovative piece of machinery designed for enhanced functionality in excavation and material handling. This specialized excavator features a unique clamshell bucket that opens and closes to efficiently scoop, lift, and transport various materials, making it ideal for tasks like dredging, landscaping, and construction. Its telescopic arm provides extended reach and versatility, allowing operators to access hard-to-reach areas with ease. Built with high-quality materials and advanced hydraulic systems, this excavator ensures smooth operation and precise control, making it an invaluable tool for projects requiring both power and precision. With its ability to adapt to diverse environments, the clamshell telescopic arm excavator significantly improves productivity and efficiency on the job site.

Suitable excavators for clamshell telescopic arm excavator : Sany, hitachi, komatsu, zoomlion, kobelco, etc

Clamshell telescopic arm excavator's **Production Details:**

- * **High Precision** make sure the clamshell telescopic arm excavator is installed on the excavator suitably
- * **Premium material** make the clamshell telescopic arm excavator work high efficiency
- * **Excellent design** make the clamshell telescopic arm excavator work stably and high efficiency

Production Details of Three-section telescopic arm

Premium Material---**BS900E** lighter and stronger

The materials: steel, cylinders, etc are all stored well and keep away from moisture and corrosion

Double-sided boring lathe

After the excavator boom and arm are assembled, the pins on the boom are drilled to ensure that the pins on the boom are parallel to each other and the cross section of the pin hole is perpendicular to the pin. The double-sided boring machine of the boom makes the hole position more accurate and the quality higher.

Make sure the cross section of the pin hole is perpendicular to the shaft.

Make sure the axis is parallel to the axis
