

12M 16M Telescopic Boom For Excavator Bucket 0.8CBM 1CBM

Guangdong Province, China

USD 30-7000 EXW price

bubble / wooden cases/ others

Co. Ltd

CE, patent, ISO

5-25/works T/T, L/C

7 sets per week

Kaiping Zhonghe Machinery Manufacturing

Telescopic Arm telescopic Boom Arm 081

Basic Information

- Place of Origin:
- Brand Name:
- Certification:
- Model Number:
- Minimum Order Quantity: 1 set / piece
- Price:
- Packaging Details:
- Delivery Time:
- Payment Terms:
- Supply Ability:

Product Specification

- Features:
- Painting:
- Cylinders:
- Color:
- Digging Depth(m):
- Patents:
- Key Word:
- Warranty:
- Material:
- OEM / ODM:
- High Effective And Longer Life-span Premium Painting High Quality Cylinders Yellow, Red, White, Blue, Customized 6m, 12m, 16m, 18m CE, ISO9001 Telescopic Arm For Sale

12M Telescopic Boom, 16M Telescopic Boom, Excavator Bucket Telescopic Boom

6 Months For The Arm

Q355B

Available

Telescopic Arm telescopic Boom Arm Q355B High Efficiency

Note: There are more than 400+ clients who chose our Telescopic Boom Long Reach Boom Long Arm More than 900 sets sliding arm are sold.

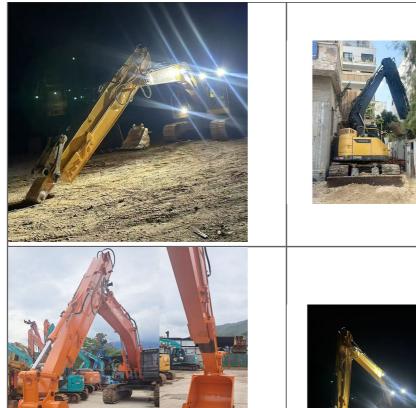

Introduction of one set of Telescopic Boom Long Reach Boom Long Arm

* Front Arm Extend and Retract *Deeper Digging Depth *Smaller Swing Range

The design of the excavator telescopic arm is a sophisticated blend of engineering and functionality, maximizing efficiency in various excavation tasks. Its multi-section configuration allows for an impressive range of motion, enabling operators to access challenging areas easily. Each component is crafted for optimal strength-to-weight ratios, ensuring lightweight maneuverability while maintaining robust performance under heavy loads. Advanced hydraulic systems further enhance responsiveness and precision, making the excavator telescopic arm an essential tool for modern excavation projects.

Installation of one set of excavator telescopic arm: * The original breaker pipeline control excavator telescopic arm's the long cylinder * The original bucket cylinder control excavator telescopic arm's bucket cylinder

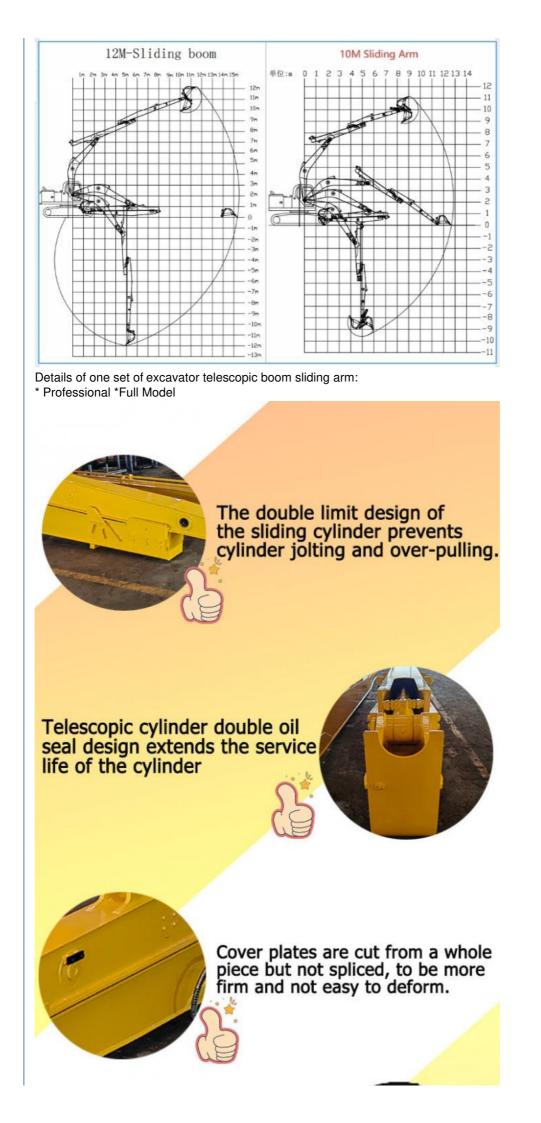

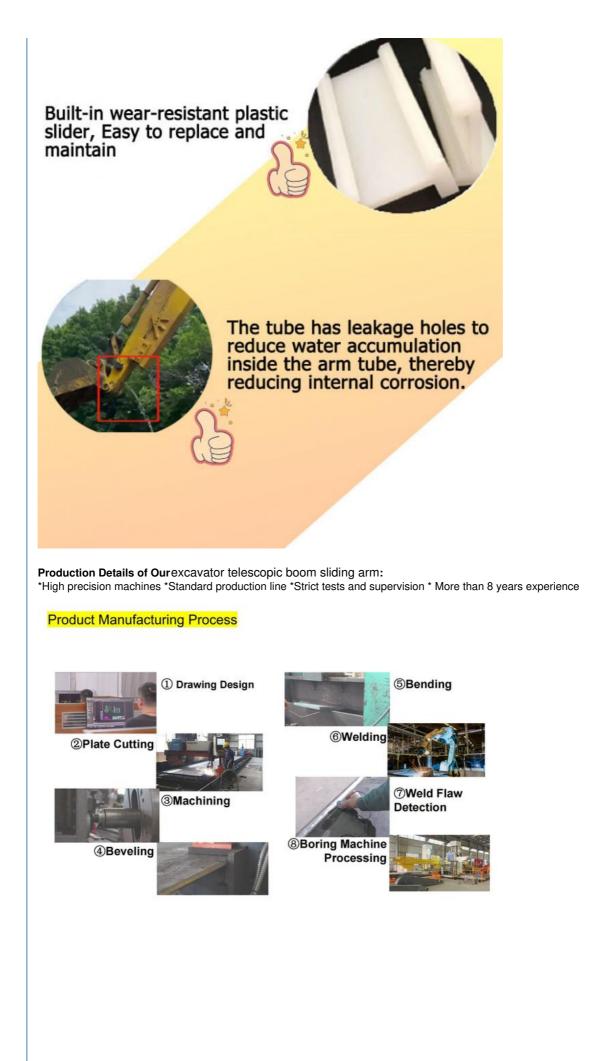

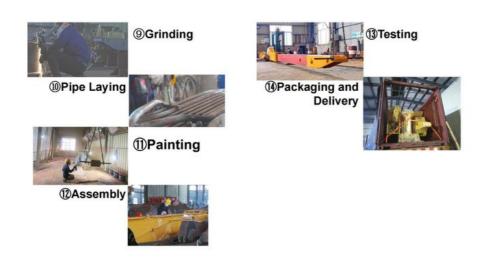

Specifications of Our excavato	or telescopic boom	i sliding arm:
*Special Design * Full Tests *Lo	nger Service Life-sp	an * High working effi

*Special Design * Full Tests *Longer Service Life-span * High working efficiency					
Excavator	Effective Length	Max Depth	Max Radius	Bucket Capacity	
(Ton)	(mm)	(mm)	(mm)	(cbm)	
12-15T	5700	8000	10400	0.2-0.3	
20-25T	9150	10000	13000	0.4-0.7	
20-25T	11000	12000	15200	0.4-0.7	
30-35T	11000	12000	15800	0.6-0.9	
40-45T	12100	16000	19200	0.8-1.3	

Product Manufacturing Process

What's the purpose of beveling before welding?

Beveling before welding serves to create a tapered edge on the metal surfaces, which facilitates better penetration of the weld joint. This process enhances the strength and integrity of the weld by allowing for a fuller fusion between the materials, reducing the risk of defects such as cracks or incomplete welds. Additionally, beveling helps in achieving a more uniform weld bead and can improve the overall appearance of the finished product. By preparing the edges properly, beveling ensures a more efficient and durable welding process.

What's the purpose of processing by large double boring machine?

The purpose of processing with a large double boring machine is to achieve precise and efficient machining of large workpieces, particularly in applications requiring accurate hole placement and alignment. This machine's dual-sided capability allows for simultaneous boring operations, significantly reducing cycle times and enhancing productivity. By employing advanced technology, it ensures consistent quality and dimensional accuracy, making it ideal for heavy-duty industries such as aerospace, automotive, and construction. Overall, the large double boring machine streamlines manufacturing processes while maintaining high standards of precision.

What's the purpose of weld flaw detection?

The purpose of weld flaw detection is to identify and assess imperfections or defects in welded joints that could compromise structural integrity and safety. By employing various non-destructive testing methods, such as ultrasonic, radiographic, or magnetic particle inspections, weld flaw detection ensures that any issues—such as cracks, voids, or incomplete fusion—are detected early. This process is crucial for maintaining high-quality standards in construction and manufacturing, ultimately preventing failures that could lead to costly repairs, accidents, or safety hazards.

Certifications of Our excavator telescopic boom sliding arm:

4. Certifications

Feedback from Clients Who Chose Our excavator telescopic boom sliding arm: * Serve very well * Longer service life-span *Easy operation *Stable and Safe

Feedback from Clients

from Tonny: Very excellent telescopic boom. on my pc 200 excavator suitably.

from Jason: cool, the telescopic boom works effectively. suitable for digging.

6

from David: very nice service. The boom works very good. safe and balanced operation from Kevin: suitable for digging caisson. save energy.

Contact Us:

* Professional *24Hour Available *Easy going

Kaiping Zhonghe Machinery is a big Manufacturer of Excavator Arms and Booms Key word: long reach boom excavator, pile arm pile boom, demolition arm, shorten arm/ tunnel arm, rock arm rock boom, telescopic arm, etc Welcome to contact for a big discount!
